Assignment 2

1)car crashes datset from seaborn library 2)load dataset 3)data visualization 4)inference for each graph

In [1]:

```
import numpy as np
import pandas as pd
import seaborn as sns
import matplotlib.pyplot as plt
```

In [2]:

```
data = sns.load_dataset('car_crashes')
```

In [3]:

data

Out[3]:

Scatter plot

In [8]:

sns.scatterplot(x='total',y='not_distracted',data=data)

Out[8]:

<AxesSubplot:xlabel='total', ylabel='not_distracted'>

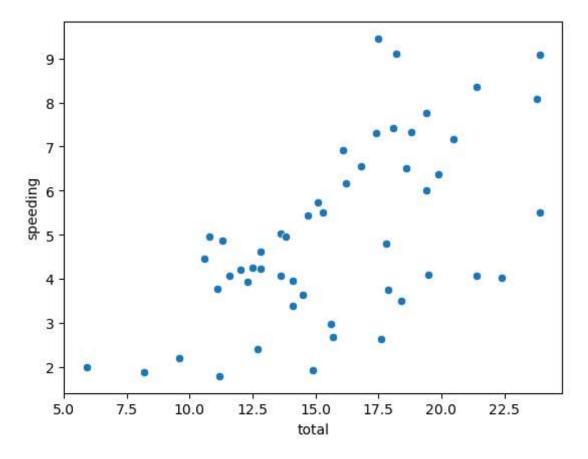

Inference: From the plot we can say total can show a linear trend

In [9]:

```
sns.scatterplot(x="total",y="speeding",data=data)
```

Out[9]:

<AxesSubplot:xlabel='total', ylabel='speeding'>

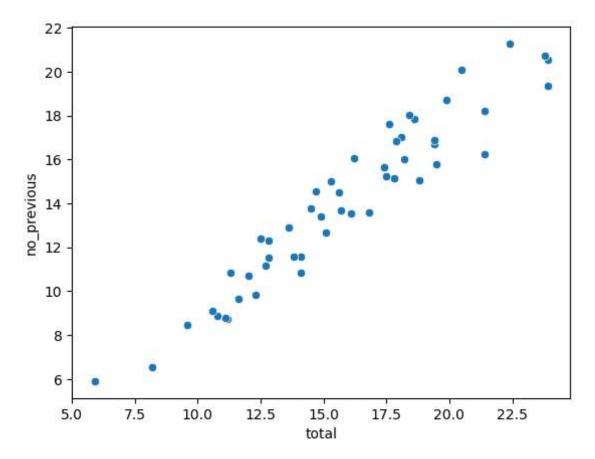

Inference: From the plot we can say that total can't show a linear trend

In [11]:

```
sns.scatterplot(x='total',y='no_previous',data=data)
```

Out[11]:

<AxesSubplot:xlabel='total', ylabel='no_previous'>

Inference: From the plot we can say that total can show a linear trend

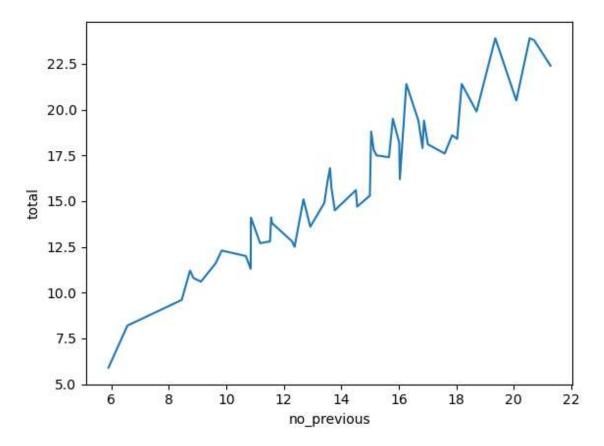

Lineplot

In [13]:

sns.lineplot(x="no_previous",y="total",data=data)

Out[13]:

<AxesSubplot:xlabel='no_previous', ylabel='total'>

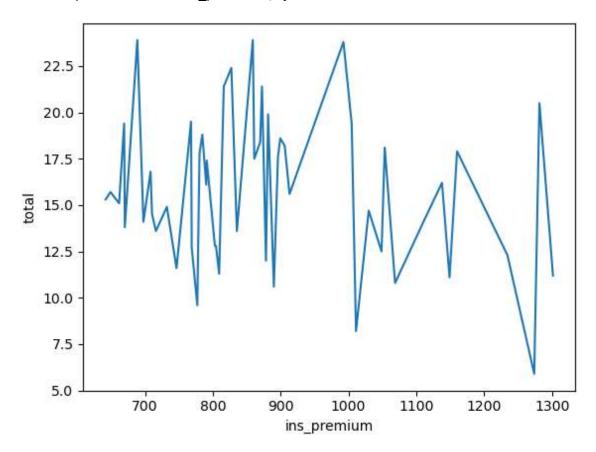

Inference:From the plot we can say there is straight line between no_previous and total

In [14]:

```
sns.lineplot(x="ins_premium",y="total",data=data)
```

Out[14]:

<AxesSubplot:xlabel='ins_premium', ylabel='total'>

Inference: Here in the plot ins_premium and total does not exhibit a linear relationship.

Heatmap

In [15]:

```
corr = data.corr()
corr
```

Out[15]:

	total	speeding	alcohol	not_distracted	no_previous	ins_premium	in
total	1.000000	0.611548	0.852613	0.827560	0.956179	-0.199702	
speeding	0.611548	1.000000	0.669719	0.588010	0.571976	-0.077675	-
alcohol	0.852613	0.669719	1.000000	0.732816	0.783520	-0.170612	-
not_distracted	0.827560	0.588010	0.732816	1.000000	0.747307	-0.174856	-
no_previous	0.956179	0.571976	0.783520	0.747307	1.000000	-0.156895	-
ins_premium	-0.199702	-0.077675	-0.170612	-0.174856	-0.156895	1.000000	
ins_losses	-0.036011	-0.065928	-0.112547	-0.075970	-0.006359	0.623116	
4							

In [16]:

```
plt.subplots(figsize=(20,15))
sns.heatmap(corr,annot=True)
```

Out[16]:

<AxesSubplot:>

Inference: From the graph we can say that it is positively, negatively and neutrally corrlated

In [17]:

```
data.isnull().any()
```

Out[17]:

total	False
speeding	False
alcohol	False
not_distracted	False
no_previous	False
ins_premium	False
ins_losses	False
abbrev	False
dtype: bool	

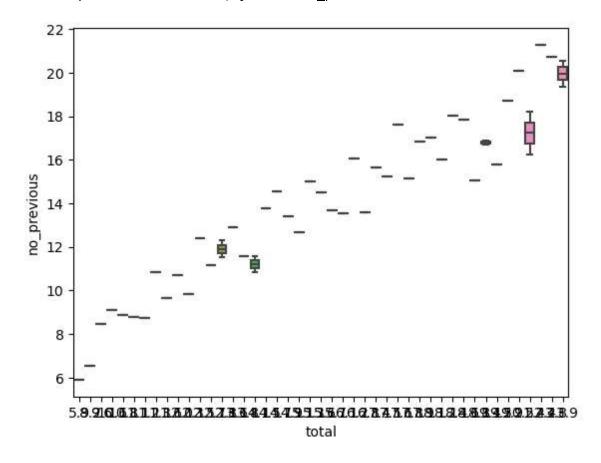

Boxplot

In [18]:

```
sns.boxplot(x="total",y="no_previous",data=data)
```

Out[18]:

<AxesSubplot:xlabel='total', ylabel='no_previous'>

Infernce: The boxplot shows the distribution of total crashes for different levels of no_previous. These lines indicates outliners

Distribution Plot

In [20]:

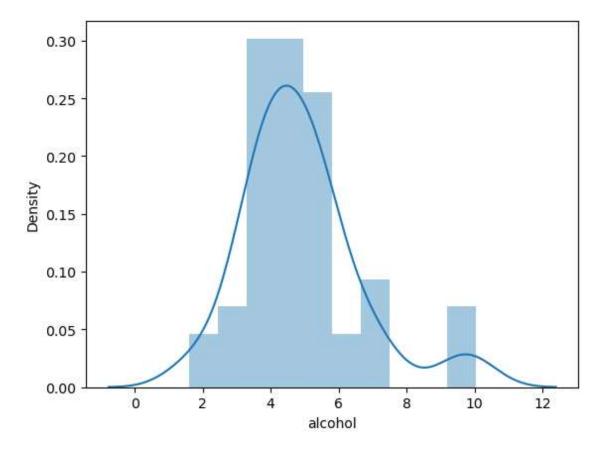

```
sns.distplot(data['alcohol'])
```

C:\Users\Vennela Baratam\anaconda3\lib\site-packages\seaborn\distribution s.py:2619: FutureWarning: `distplot` is a deprecated function and will be removed in a future version. Please adapt your code to use either `displot` (a figure-level function with similar flexibility) or `histplot` (an a xes-level function for histograms).

warnings.warn(msg, FutureWarning)

Out[20]:

<AxesSubplot:xlabel='alcohol', ylabel='Density'>

Infernce: The distribution of alcohol is right skewed

In [21]:

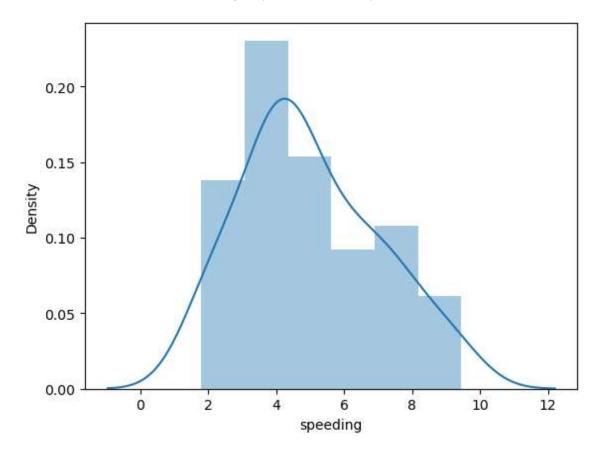

```
sns.distplot(data["speeding"])
```

C:\Users\Vennela Baratam\anaconda3\lib\site-packages\seaborn\distribution s.py:2619: FutureWarning: `distplot` is a deprecated function and will be removed in a future version. Please adapt your code to use either `displot` (a figure-level function with similar flexibility) or `histplot` (an a xes-level function for histograms).

warnings.warn(msg, FutureWarning)

Out[21]:

<AxesSubplot:xlabel='speeding', ylabel='Density'>

Inference: The distribution of speeding is right skewed

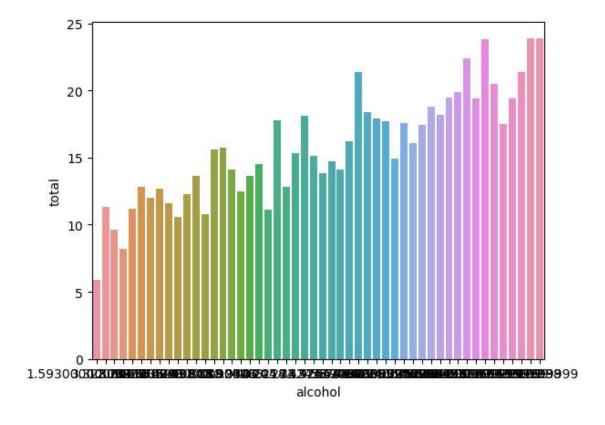

Barplot

In [22]:

sns.barplot(data=data,x="alcohol",y="total",ci=None)

Out[22]:

<AxesSubplot:xlabel='alcohol', ylabel='total'>

Inference: The barplot displays the mean total crashes for different levels of alcohol consumption, here the alcohol consumption is directly proportional to total crashes

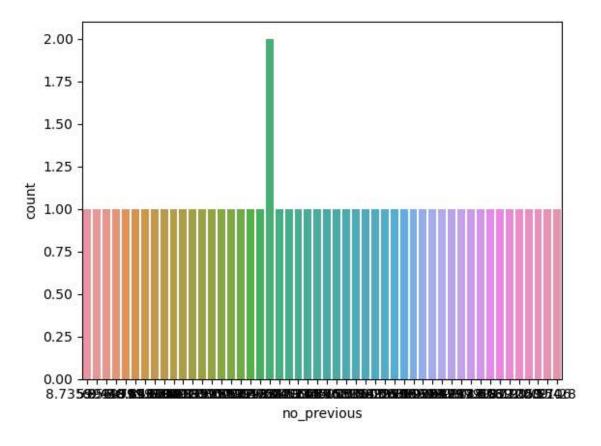

Countplot

In [23]:

```
sns.countplot(x="no_previous",data=data)
```

Out[23]:

<AxesSubplot:xlabel='no_previous', ylabel='count'>

Inference: From the plot it can be observed that count is high only at 1 value in no_previous

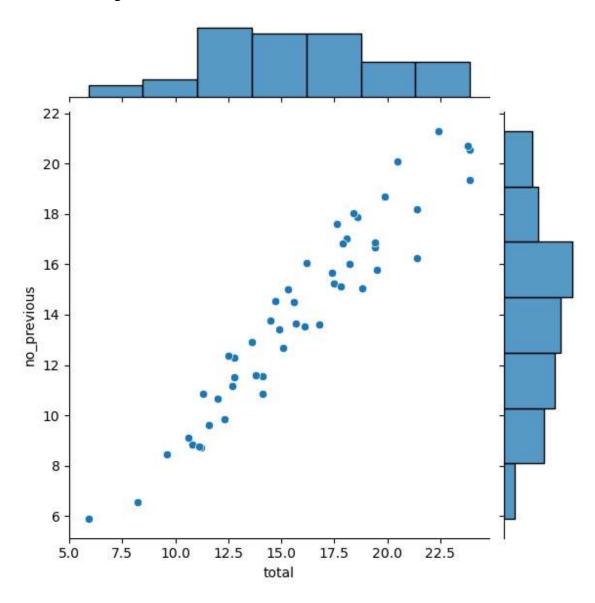

Jointplot

In [24]:

sns.jointplot(x='total',y='no_previous',data=data)

Out[24]:

<seaborn.axisgrid.JointGrid at 0x18bdb3c9d30>

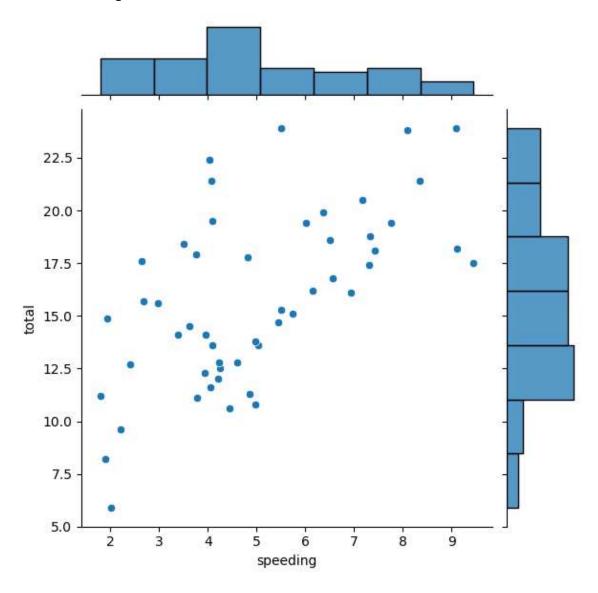

Inference:Form the jointplot we can say that total and no_previous crashes are directly proportional.

In [25]:

sns.jointplot(x="speeding",y="total",data=data)

Out[25]:

<seaborn.axisgrid.JointGrid at 0x18bdb622ee0>

Inference: From the jointplot it can be observed that there is no specific patterns in speeding and total

In []:
